B. Debt Service Sub Fund

The District established a rate stabilization fund to mitigate cyclical development related revenue, assessment prepayments, and treatment plant costs that vary dramatically year to year. Additionally, the impact of weather on annual water sales can be significant.

There is currently \$1.16 million in the Debt Service Sub Fund that can only be used to make parity bond payments in the unlikely case insufficient cash is generated from operations in any given year. In the event of a cash shortfall, the amount transferred from this fund to cover the shortfall can be included in that year's debt coverage calculation. However, it is a violation of District policy to use these funds to calculate debt coverage for budget purposes.

Policy requires the District to maintain a minimum \$1.0 million balance in this fund. If the balance falls below \$1.0 million, District policy is required to restore the balance to \$1.0 million within 36 months.

4. THE WATER SYSTEM

A. Overview

The District water system consists of a complex distribution system with several water sources, including springs, wells, and surface diversions. The system also includes a raw irrigation system for two golf courses and other appurtenant irrigation uses.

The distribution system has approximately 200 miles of pipelines interconnecting the District's water sources to tanks, to a raw water storage pond, to individual water users, and to wholesale customers. The District also supplies three major wholesale customers, namely Park City, Weber Basin Water Conservancy District, and High Valley Company, and is a backup to Gorgoza Mutual Water Company, Pine Meadows, and Service Area #3.

The District has 14.4 million gallons of culinary water storage and 13.0 million gallons of raw water storage. The District can treat water for distribution purposes at a peak of 4.0 million gallons per day.

B. Sources and Supplies of Water

The District has acquired sufficient water rights and developed sufficient sources to meet its current and projected growth demands. District water production by source is shown on the following page.

(1) - Starting in 2011, the District implemented a policy to reduce or eliminate production in old, inefficient wells with unpredictable water quality; and to replace this reduced production by increasing production in the Lost Creek surface water diversions that is treated before it is delivered to culinary customers. Surface water is more drought resilient than District wells typically are, and the power cost per gallon is lower for Lost Creek water production.

(2) - The District produces and transports water from its source to other water companies. The other water companies either own or lease the related water rights for the water transported by the District.

Production for District customers decreased -9.7% to 3,042 acre feet in 2019 primarily due to a very cool and wet start to the summer. In 2018 production for District customers was very high due to a very hot and dry summer.

Water transported by the District to other water companies increased 5.7% in 2019 primarily due to Park City taking 2,312 acre feet in 2019 as compared to 2,114 acre feet in 2018. Park City is allowed to take up to 2,900 acre feet per year under their agreement with the District. In upcoming years it is projected that Park City will take close to their maximum allotment as they begin construction on a new treatment plant and will have only their treatment plant supplied by this water operating.

Weber Basin took 800 acre feet of water during 2019, however during 2020 the contracted amount increases to 1,100 acre feet.

Water transported by the District to other water companies has increased by 43% since 2015 when 2,287 acre feet was delivered. In 2019, 3,270 acre feet were transported and projections are that this amount will increase in 2020 due to the additional 300 acre feet being delivered to Weber Basin and the likely increase to Park City.

Regarding water sources, the District currently utilizes 14 groundwater wells, a groundwater spring, and two large surface water diversions at or near Rockport Reservoir. These sources yield a combined peak flow of approximately 14,000 gallons per minute.

The District has acquired sufficient water rights, entered into future importation contracts with Weber Basin Water Conservancy District, and developed sufficient source capacity to meet its current and projected growth demands.

The Lost Canyon project alone utilizes two Rockport surface diversions which can produce over 10,000 gallons per minute of source flow or approximately 6,500 acre feet per year. Park City owns capacity rights up to 2,900 acre feet of the Lost Canyon project; and the District owns capacity rights of approximately 3,600 acre feet.

The District's service area resides within a steep vertical terrain, ranging from a low 6,100 foot elevation to over 9,300 feet, and as such, the District operates 145 pump facilities. All pumping systems combined have a peak capacity of nearly 37,000 gallons per minute, with pumps totaling nearly 10,000 horsepower.

These systems utilize an advanced SCADA (telemetry) system which controls all tank levels, well pumps, treatment facilities, and booster pumps, and plays a key role in District energy efficiency programs. As a result of current energy and water conservation management strategies, the District has realized a significant savings in energy and power.

C. Water Connections

The District's water connections are shown below, along with its equivalent residential connections ("ERC"). An ERC is the amount of water consumed by a typical residence in one year, which is .50 acre feet. All residential customers are considered to be 1.0 ERC.

(1) ERC Equivalent was adjusted from .6 acre-feet to .5 acre-feet as of 1/1/2020

All nonresidential customers including commercial, industrial, and irrigation accounts generally use more water than a typical residence, so their use is equated to how many residences use an equivalent amount of water. The standard ERC for nonresidential customers is also set at 0.50 acre feet annually.

Total ERCs have increased 1,444 or 13.2% from May 2019 due to two reasons. First, the annexation of Community Water brought in just under 500 residential customers and 7 commercial customers. Secondly, during 2019 a new Impact Fee Rate Study was performed which resulted in the average ERC decreasing from 0.6 acre-feet to 0.5 acre-feet. As part of the Impact Fee Rate Study average usage by residential customers is analyzed, this analysis showed that residential customers are using less water per connection, thus dropping the usage per ERC and increasing the total ERC count.

Over the past 12 months the District transported 3,965 ERCs to Park City and 1,600 ERCs to Weber Basin under regionalization agreements.

New customers using water increased by 650 over the past twelve months to 4,521, a 16.8% increase due mainly to the Community Water annexation as mentioned previously.

As of May 2020, there were 1,742 standby units, which is 25 more than twelve months ago. This indicates the number of newly platted undeveloped lots is slightly above new buildings constructed on existing lots.

(1) - High Valley is a private water company for which the District transports water from a jointly owned source operated solely by the District. High Valley also has its own sources as well. The numbers shown represent only the amount of water wheeled by the District.

(2) - The District wheels water from Summit Water (private water company) sources to the Olympic Park. The Olympic Park is a District customer, and the District operates and maintains the Olympic Park water system and the interconnect from Summit Water.

(3) - The District transports water to Park City through District sources and infrastructure. Park City reimburses Mountain Regional for actual wheeling costs plus a capital buy-in and repair/replacement component. The related water leases are owned by Park City.

(4) - Under the terms of the water regionalization agreement, the District is selling its surplus water to Weber Basin.

(5) - Commercial use has been adjusted for 2017 and 2018 due to a meter error at the Home Depot location.

F. Major Wholesale Water Users

The District provides wholesale water service to various entities.

Park City Municipal Corporation. The District has a long-term contract to wheel up to 2,900 acre feet annually to Park City through the District's transmission system from Rockport Reservoir to Park City's treatment plant.

Summit Water. In 2011, the District entered into an agreement with Summit Water Mutual Water Company to sell up to 400 acre-feet per year of culinary water until 2025, or when an additional importation project is developed in Snyderville Basin, whichever comes first.

Weber Basin Regionalization Agreement. In 2013, the District entered into an agreement with Weber Basin, Park City, Snyderville Basin Water Reclamation District, and Summit Water. This agreement allows Mountain Regional to sell its surplus water to Weber Basin. Weber Basin can then resell this water to other water entities in the Snyderville Basin who need water.

Weber Basin currently has a five-year contractual commitment with Summit Water to purchase water from the District under the regionalization agreement. Under this agreement, and the aforementioned agreement with Summit Water, the following water totals were delivered to Summit Water: 677 acre feet in 2016, and 783 acre feet in 2017, 800 acre feet in 2018 and 800 acre feet in 2019, another 1,100 acre feet is committed to be delivered and purchased under these agreements in 2020.

G. System Rates and Charges

The District has authority pursuant to State law to establish rates for its water service effective at any time. The law only stipulates that these rates and charges be fair and reasonable.

The District adopted a 3% water rate increase effective on bills issued in January 2019. Prior to this increase there had not been one since September 2015. The District plans to review rates every year, and when necessary implement smaller, more frequent increases. Historically the District implemented larger increases on a less frequent basis.

The District's current water rates and charges are shown on the following pages.

H. User and Connection Fees

In addition to water usage charges, new connections within the District are assessed connection and meter fees, as shown below. The District generally collects these fees at the time a building permit is issued.

The District also collects fees related to fire hydrant rentals, inspections, delinquent payments, theft of service, and conservation violations.

Theft of Service		1,000	<i>Per Occurrence</i>
Impact Fee Review		100	<i>Per Lot</i>
Fire Flow Report		100	<i>Per Occurrence</i>

Lot owners in the District have the option of designating their lot as non-developable by declaring a restrictive covenant. However, if in the future, a lot owner decides to build on the lot, the owner is assessed a Release of Restrictive Covenant fee that includes all fees and charges avoided during the period the covenant was in place, plus interest.

The District assesses an Alternative Provider Fee to users who are contractually committed to receive water from the District, but choose to change water providers. The imposition of such a fee helps to ensure the Net Revenues available to pay debt service will not decrease if such customers choose another water provider.
